

Franklin Academy Enrichment Classes

Swimming

Children will love to learn splashing around the pool while learning basic swimming skills. Our swim program helps children develop safe pool behavior, adjust to the water, and develop independent movement in the water. It is designed to teach basic paddle stroke and kicking skills, pool safety, and comfort in holding their faces in the water while blowing bubbles and swimming.

Art

Scribbling with crayons, painting, cutting, and gluing are experiences that help children learn how the mind and hands work together to create. This class gives your child the sense of having created something that is entirely theirs.

Performing Arts

The children enjoy the variety and excitement of storytelling and music. This class gives the children an opportunity to explore storytelling and the opportunity to act out stories. There is a focus on promoting and developing language skills, as well as exposing them to a variety of rhythms and beats.

Tennis

This program focuses on children's hand-eye coordination. The instructor works on the child's motor development through various exercises that prepare many children for the life-long enjoyment of tennis.

Yoga

This class helps children develop body awareness and is a healthy beginning to learning concentration. Children learn to move their bodies in a healthy way while increasing their confidence and positive self image. Learning basic yoga moves in a non competitive atmosphere is creative and calming.

Spanish

Learning Spanish and incorporating it into their everyday language is the focus of this class for the children. The children will participate in lessons focused on learning numbers, colors, shapes, and songs.

Gymnastics

The goal is to provide a safe and fun environment where the students can practice their gross motor skills through physical development. This class is designed to improve balance, strength, and coordination through a wide variety of games and activities. The focus of this class is to have fun while learning basic gymnastic skills.

Library

Reading actually aids in brain development, especially in your child's first five years of life. When kids are read to, their brain cells are literally turned on, and existing links among brain cells are strengthened and new cell links are formed. When we read to aloud to kids, we send them this message: You are important. This time is for you. This class introduces children to books and activities to connect to the book.

Science

This class connects children with the world around them. Science is all around us - our bodies, in nature, through cooking and gardening to name just a few. The children talk about what they see, feel, taste, hear, smell and discover. Science experiments encourage curiosity and many, many questions.
